

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently Amended): A communication apparatus connectable to a communication network which provides a call forwarding service comprising:

reception means for receiving identification information of a calling party notified from the communication network when an incoming call is detected at the communication apparatus; and

setting means for setting the communication network to activate the call forwarding service such that an incoming call for the communication apparatus is forwarded to the calling party of the identification information received by said reception means,

wherein an incoming call, ~~which will be detected at the communication apparatus~~ after the setting by said setting means, is means is forwarded to the calling party of the identification information by the service of the communication network.

Claim 2 (Currently Amended): The apparatus according to claim 1, wherein said reception means can receive identification information of another communication apparatus transmitted from the calling party, and said setting means can set the communication network to activate the call forwarding service on the basis of the identification information of the other communication apparatus.

Claim 3 (Currently Amended): The apparatus according to claim 2, wherein said reception means receives the identification information of the other communication apparatus depending on whether or not the identification information of the calling party is received.

Claim 4 (Currently Amended): The apparatus according to claim 2, wherein said setting means sets the communication network to activate the call forwarding service on the basis of the identification information of the calling party or the other communication apparatus in accordance with an instruction from the calling party.

Claim 5 (Original): The apparatus according to claim 1, wherein said setting means sets in accordance with a password sent from the calling party.

Claim 6 (Currently Amended): The apparatus according to claim 1, wherein said reception means also receives time information associated with an activation time of the call forwarding service sent from the calling party, and said setting means ~~activates~~ sets the communication network to activate the call forwarding service on the basis of the time information.

Claim 7 (Currently Amended): The apparatus according to claim 6, wherein the time information includes information associated with a deactivation time of the call forwarding service.

Claim 8 (Currently Amended): The apparatus according to claim 6 7, wherein said setting means ~~issues a forwarding deactivation request to~~ sets the communication network to deactivate the call forwarding service on the basis of the time information.

Claim 9 (Original): The apparatus according to claim 1, further comprising:
notification means for notifying an activation result of said setting means.

Claim 10 (Original): The apparatus according to claim 9, wherein said notification means notifies a forwarded-to site set by said setting means of the result.

Claim 11 (Original): The apparatus according to claim 8, further comprising:
notification means for notifying a deactivation result of said setting means.

Claim 12 (Original): The apparatus according to claim 11, wherein said notification means notifies a forwarded-to site set by said setting means of the result.

Claim 13 (Original): The apparatus according to claim 1, wherein the communication network includes an ISDN (Integrated service digital network).

Claim 14 (Original): The apparatus according to claim 13, wherein said setting means activates a call forwarding unconditional function of the ISDN.

Claim 15 (Currently Amended): A method of controlling a communication apparatus connectable to a communication network, which provides a call forwarding service, comprising:

a reception step of receiving identification information of a calling party notified from the communication network when an incoming call is detected; and

a setting step of setting the communication network to activate the call forwarding service such that an incoming call for the communication apparatus is forwarded to the calling party of the identification information received in said reception step,

wherein an incoming call, ~~which will be detected at the communication apparatus~~ after the setting in said setting step is forwarded to the calling party of the identification information by the service of the communication network.

Claims 16-29 (Canceled)

Claim 30 (Currently Amended): A communication apparatus connectable to a communication network, which provides a call forwarding service, comprising:

detection means for detecting an incoming call notified from the communication network;

reception means for receiving information designating forwarded to site via the communication network when the incoming call is detected by said detection means; and

notification means for notifying the communication network of the information such that an incoming call to the communication apparatus is forwarded to the forwarded-to site designated by the received information,

wherein an incoming call, ~~which will be detected at the communication apparatus after the notification, is~~ notification is forwarded to the forwarded-to site by the service of communication network.
